FIBERBUILT UMBRELLAS & CUSHIONS GRANTED PATENT FOR THE FLIGHT UMBRELLA

Pompano Beach, FL (May 18, 2022) FiberBuilt Umbrellas & Cushions' CEO Paul Knapp has been awarded a patent for his innovative design for the Flight umbrella. Flight's inverted rib system provides ample support to the canopy which is flat when fully open, providing a minimal silhouette for a contemporary feel that's visually striking.

FiberBuilt has long been the leading manufacturer of fiberglass ribbed umbrellas, and this model incorporates fiberglass ribs and polished aluminum components. While the gently curved, bright aluminum upper ribs catch your attention, the 3/4" diameter fiberglass ribs are concealed within the canopy's fabric. From their comfortably shaded chaise, the only thing your guest sees is the beautiful fabric canopy. The structure is superbly engineered to stand up to high winds and hospitality use.

Flight's two-inch diameter, one piece aluminum pole comes in a matching anodized finish. This gives the umbrella a sophisticated look suitable to a variety of applications – from boutique hotels to upscale restaurants. The umbrella is available in 9' and 11' diameter. The canopy is made of furniture grade solution dyed acrylic fabric.
